## **SHOUTrds 2.5 Preview**

Currently I'm working around the clock to get the 2.5 version of SHOUTrds ready. In this version a few new features are added, bugfixes are done and changes are made.

### **New features**

These are the most important new features:

- + Support for SHOUTcast 2.0 (beta).
- + Support for SAM Broadcaster.
- + RDS2Twitter to send RDS to Twitter.
- + MultiStream technology to stream to multiple streams.
- + A logfile for debugging.

### **Changes made**

The Server Configuration is moved from the main form to an own dialog. A dialog to show Server Status is added. The scheduler no longer shows "\* Is not a valid integer value" on sorting the items. Textsender (the thing that sends the RDS) and Scheduler now have their own dialogs. The options to send text to MSN and to read OtsDJ songinfo have been moved to the More Options dialog. Sound, Graphics and Error Handling can be turned off inside the program (More Options dialog).

### **Screenshots**

Click to enlarge.

This is how the new mainform looks like.

This is the log dialog, it's not styled.

This is the More Options dialog, from here you can change Ots, SAM, MSN, Twitter and more.

This is the SAM Settings dialog to configure SAM settings.

This is the new Server Configuration dialog, from here you can configure your server.

This is the ServerStatus dialog showing which RDS line is being sent to which server.

This is the new Twitter Settings dialog, from here you can configure your Twitter account.
